

## Sweet Potato

Who would have thought that a chartreuse variant of the garden sweet potato would have caused such a stir? We've had more calls on this plant than any other. Most people are shocked to learn that it is, in fact, a sweet potato variety. These plants will establish themselves very quickly – it is not unusual for them to grow several inches a day. They can be planted on 12 inch centers which saves money. We've also discovered that they'll take a lot of shade, so they can be used to brighten a dark area of your property. A dark purple variety is also available, and planting the two varieties together can make for a very interesting mix.
